# PRO-X HYBRID KIOSK

## A complete checkout experience in a space-saving kiosk

As shoppers increasingly look for low-contact, self-service options, Toshiba's Pro-X Hybrid Kiosk provides a versatile, cost-effective solution that gives retailers the ability to reimagine their stores. This modular, compact kiosk fits right into your existing store environment, including smaller store formats that might not have space for traditional self-service solutions, and provides more transaction points to help move lines quickly through dense and congested checkout areas. With the Pro-X Hybrid Kiosk, retailers can deliver the convenience and control that shoppers want, along with the flexibility and ease of use that associates need to manage checkout lines proactively. Simply because it's a Toshiba solution, you get the collective power of Toshiba's elite team of Global Services consultants, developers, and product experts to ensure that you receive an end-to-end strategy that will advise, enable, deploy, and maintain your investment whatever your use case.

The Pro-X Hybrid Kiosk opens up new opportunities by delivering a convenient self-service experience to markets, segments, and unique retail environments whether they have self-service today or not. This compact kiosk is an ideal solution in the following settings:

- > Convenience stores
- > Neighborhood grocers
- > Grab-and-go newsstands in malls and airports
- > Specialty and hospitality stores
- > Grocery food courts
- > Ticket sales and concession stands
- > Check-in at conventions, tradeshow and airports
- > Bridal and gift registries
- > And more

### Reimagining store design

What if your store's front-end wasn't just at the front of the store? Or if customers could place orders at a variety of touchpoints throughout the store? Space is at a premium, especially in stores that already have limited available floor space. The Pro-X Hybrid Kiosk gives you the freedom to innovate and be creative about where transactional touchpoints could be, without the cost that comes with ripping and replacing the entire front-end. And thanks to a rotating base plate, the entire kiosk can attach to a counter and swivel so

that it can immediately serve as either a cashier-attended lane or a self-service station as quickly as it's needed, eliminating the need for cashiers to use precious seconds during the checkout process to walk around the counter. Made to seamlessly complement a retailer's current infrastructure, including cashier-attended and self-checkout lanes, the Pro-X Hybrid Kiosk gives retailers the ability to transform the entire store, while protecting existing technology investments.

#### Retailers

Reduces the cost of checkout, labor, and front-end transformation.

#### Associates

Helps manage shopper flow through the front end, especially during shopper surges.

#### Customers

Delivers the choice, control, and privacy that shoppers expect at checkout.

### Built to evolve with you

To help retailers make the most of the physical space in their stores, we built the Pro-X Hybrid Kiosk to enable flexibility, with a low-profile design that doesn't compromise on performance. Retailers can create what works best for their stores' flow, labor availability, and shoppers' needs. Each Pro-X Hybrid Kiosk includes an all-in-one POS, high-speed printer, scanner, PIN pad, and optional transaction awareness light. And because retailers' needs can change from store to store, Toshiba provides retailers with the power to choose the peripherals and configurations that make the most sense for their operational needs, including:

- > The all-in-one POS that aligns with your existing brand strategy
- > High-performance digital imaging scanner seamlessly reads 1D, 2D, printed, electronic and hard-to-read barcodes
- > Optional 180-degree rotating base allows cashiers to assist shoppers when needed or during shopper surges
- > Flexibility that allows retailers to continue using existing PIN pads
- > Optional transaction awareness light that empowers shopper assistants to proactively manage interventions
- > Fast, secure, and reliable presentation printer that retracts the receipt if left behind
- > Compatibility with Windows-based self-service POS applications
- > Optional connectivity to additional printers and other external devices

### Designed for retailers, with retailers

Retailers should have more options in how they serve their customers, and shoppers are increasingly averse to standing in long lines. As self-service continues to be a valuable mainstay in the retail industry and retailers keep investing in digital capabilities to support shoppers' expectations, creating durable systems to execute a seamless, express self-service journey is critical. That's why we worked directly with retailers, relying heavily on their feedback, when creating the Pro-X Hybrid Kiosk. By focusing on their shoppers' expectations, we designed it to allow retailers across segments, of any size, to invest in digital capabilities that deliver convenient self-service to their customers.
