3 steps to creating one single frictionless and integrated POS solution

Today more than ever, retailers need to demonstrate their commitment to keeping stores safe, clean and secure. This is particularly the case in areas of high footfall, such as at the Point of Sale where the majority of customers will pass through to make a purchase. In response to increased hygiene requirements, there are now quick and easy ways to transform checkout areas to make them frictionless – or touch-free. With fewer touch points, the chances of spreading any infections are far less, helping to keep your staff and customers safe – and demonstrating to them that you care about their welfare.

Re-use your existing POS

As a retailer, you will already have an existing POS solution in place and you may believe that updating your POS to provide frictionless payments could be an expensive task. Yet this doesn't have to be the case. With adapters and mounts from Ergonomic Solutions, it is possible to enable a range of touch-free self-scanning tasks using the equipment you already have, allowing you to make cost effective improvements to your POS, with hygiene and customer safety in mind.

How it works

Through our close partnership with leading enterprise device manufacturer Zebra Technologies, we have created a unique solution that enables retailers to transform their POS using a simple, modular and cost effective trio of products. The configuration you choose is up to you: each way you use the solution it will provide frictionless shopping options for your store.

Three simple steps to frictionless Point of Sale

The SpacePole Scanner Mount Adapter

The SpacePole Scanner Mount Adapter elegantly encloses and securely fixes Zebra's MS4717 fixed mount 2D imager to your existing payment terminal mount or point of sale.

By providing a barcode scanner at the point of payment, customers can quickly scan their own smart phone or loyalty card for a totally frictionless way to pay, add or spend loyalty points, or even access their store accounts – all touch-free.

The adapter mount allows you to add a 2D scanning solution to your existing POS system without having to replace your entire set-up, making it cost effective and easy to implement.

Adding self-scanning to your checkout creates customer confidence and an environment that feels safe to shop in. It demonstrates that the welfare of your customers and staff is top of your agenda, whilst meeting changing regulatory requirements.

The MS4717 fixed mount imager

Featuring Zebra's exclusive PRZM Intelligent Imaging technology, the MS4717 can instantly capture virtually any 1D or 2D barcode, providing flexibility for a wide range of applications. This award-winning data capture technology offers ease of integration, high reliability and superior scanning performance on virtually any 1D & 2D barcode, including dense, poorly printed, damaged, crinkled, faded, distorted, low-contrast, and glossy printed barcodes, as well as barcodes on plastic ID cards or from mobile phone displays.

And with the bright, rectangular illumination field and the LED aiming dot, users instantly know if they are aiming at the right spot across a variety of applications.

The ET56 enterprise tablet computer

With enterprise-class durability, data capture and a family of accessories, the Android ET56 from Zebra allows you to create the perfect tablet solution for your store, workers and customers. The thinnest and lightest of Zebra's rugged tablet computers, the ET56 is a tablet built to handle all of your everyday business.

It provides staff with a familiar consumer-looking device that offers superior data capture functionality for greater efficiency and elevated shopper satisfaction.

Retailers using tablet POS solutions in conjunction with Zebra's ET56 enterprise tablet computer can simply attach the 2D M4717 device to an Ergonomic Solutions tablet enclosure to enable a range of scanning tasks, without having to unclip the tablet; creating one totally integrated solution.

The modular nature of the SpacePole range makes these upgrades fast and simple to install.

Mounted tablet enclosures for a complete tablet POS solution

Did you know we also supply X-frame and A-frame tablet enclosures and the pole mount for the ET56 – providing a complete tablet POS solution?

This can be a secure fixed POS or a self-service solution with the option of adding the MS4717 for scanning barcodes – it can be counter, wall-mounted or freestanding.
