

# Vehicle-Mount Use Case: Fresh AB – Growth in the warehouse with JLT Rugged Computers

## Initial situation

Fresh AB is one of the leading Nordic suppliers of ventilation products and systems for residential buildings, based in Sweden. After almost 50 years at the Gemla site, the company moved into a new, approximately 8,000 m<sup>2</sup> warehouse and production facility in centre of Växjö.

The company's rapid growth posed significant challenges for logistics:

- Manual, paper-based warehouse processes without digital support
- Extremely uneven warehouse floor with holes – severe vibrations and shocks on forklift trucks
- Use of forklifts both indoors and outdoors in changeable Nordic weather
- A growing workforce: approx. 65 permanent staff + 50 external employees from Samhall

## The result:

Inefficient warehouse processes and a lack of digital integration with the new ERP system were holding back growth.

## Solution

When moving to its new premises, Fresh AB was looking for a solution that:

- integrates seamlessly with **Monitor's** new **ERP system**
- operates reliably under harsh conditions – vibrations, shocks, temperature fluctuations
- ensures **stable, uninterrupted Wi-Fi communication** throughout the warehouse
- could be used both indoors and outdoors

The choice fell on the **JLT1214P Vehicle-Mount Computer from JLT Mobile Computers**, which was mounted directly onto the forklift trucks in the warehouse. As the JLT devices had already been running reliably in the old warehouse, they were taken along during the move and supplemented with new units of the same model as the business grew.

The devices were connected directly to the Monitor ERP system and have since enabled fully digital warehouse management on all forklift trucks. Additional order-picking vehicles equipped with JLT computers and scanners are planned for the next phase of expansion.

## Technical highlights

- Extreme resistance to vibrations, shocks and Nordic weather conditions
- Stable Wi-Fi connectivity for uninterrupted ERP communication
- Touchscreen operation – even when wearing gloves and in fluctuating temperatures
- Seamless integration into the Monitor ERP system
- Reliable continuous operation – no unplanned downtime or reboots

All staff can access and process relevant warehouse information directly at the vehicle and process it – from forklift drivers to logistics management.

Anders Ekholm, forklift driver at Fresh AB, reports:

“

“The forklift, my scanner and the JLT computer are my most important tools. I am completely reliant on them. The computer gives me immediate access to all relevant information – that’s crucial for the entire warehouse logistics flow.”

”

## Results and benefits

- Fully digitised warehouse processes – paperless picking and administration
- No equipment failures: not a single repair request in several years of operation
- Stable Wi-Fi connections for all vehicles in the 8,000 m<sup>2</sup> warehouse
- Investment has already paid for itself – total cost of ownership clearly positive

## Conclusion:

Fresh AB has chosen JLT as a long-term partner and plans to expand with order-picking vehicles and scanners for the warehouse of the future.

The **Advanced Systems team at QUAD** supports you in the planning and implementation of robust vehicle-mounted solutions for your warehouse – from evaluation through to roll-out.
